

Subject: Security of our Community Website

Our website <https://ellicottmillshoa.jimdofree.com> uses Jimdo.com for our free community website. Jimdo.com websites use the secure and encrypted HTTPS format. This ensures a secure connection between our Jimdo website and all browsers visiting our website. It protects not just you, but all website visitors. You'll notice a small closed padlock icon at the beginning of our URL.

Hyper Text Transfer Protocol Secure (HTTPS) protects the communication between your browser and server from being intercepted and tampered with by attackers. **In addition**, our community website requires a password to gain access to all confidential areas of the website including Board member contacts, community directory, monthly board minutes, and financial information.

We encourage you to use latest malware software and OS versions on your personal smartphones, computers, and other digital devices to help prevent identity thief, and hacking. Also, beware of phishing scams by not clicking on suspicious emails and/or websites. Be sure to report all spam emails and delete them. Check updates and run your malware programs often. These actions will protect you and other community members. Thank you.
